

Physics A-level

Neil Trentham

I have tutored A-level physics students for several years and provide tuition for AS and A2 students. I design a course around each student. Some students prefer to cover topics as they study them in school. Others prefer to go through the syllabus in order. My lessons normally follow a slideshow going through each topic and then working through A-level questions together on the topics to prepare students for when they see them in the exams. I have a large bank of questions to choose from so we can address any difficulty a student might have. In the lead up period to the exams, I normally work through many past questions with each student so they build confidence in answering them the right way in the exam.

Beyond A-level, I am happy to help students develop any interests in physics and other sciences. In my 20 years at Cambridge University I have lectured on a range of subjects and I currently offer courses in Cambridge in cosmology and astrobiology.
